Price Support

Statistical Handbook

November 1956

Agriculture - Washington

SEP - 4 1988

United States
Department of
Agriculture

National Agricultural Library

FOREWORD

This handbook has been prepared as a price support reference guide for the use of Washington and field employees of the U. S. Department of Agriculture. It combines in one volume certain basic information relating to price support programs conducted by the Commodity Credit Corporation of the Department of Agriculture since its incorporation on October 17, 1933.

The handbook is divided into these two parts:

Part I - This part consists of a series of summary tables. One set summarizes the information on level of support contained in the individual commodity tables in Part II. The remaining summary tables relate to such matters as the relative importance of the various methods of support used by CCC and the percentage of total U. S. production placed under price support.

Part II - This part consists of a series of tables--one for each of the commodities for which CCC has conducted a price support program. Each table indicates the year in which CCC supported the commodity and, where available, the level of support (both in terms of percentage of parity and the U. S. average dollars-and-cents support level), the method of support, and whether the program was mandatory or permissive.

The CCC price support programs covered in the handbook are the only programs undertaken by the Department in which the Department purchases or makes loans on commodities at fixed prices related to a parity standard. In addition to these CCC price support programs, the Department also conducts these major programs which affect prices received by farmers: (1) Section 32 programs, which remove limited quantities of surplus commodities from the normal channels of trade; (2) marketing agreement and order programs, which seek to stabilize marketings of certain fruits, vegetables, tree nuts, and fluid milk; (3) quotas under the Sugar Act of 1948, as amended. Information covering these other programs is available in other publications of the Department.

The CCC price support programs included in this handbook cover all programs classified in the CCC budget as price support since 1947 (when the current budget classification was adopted), and other programs in effect prior to 1947 which would have been classified as price support under the present budget category. The current CCC budget provides for five budgetary programs--price support, supply and foreign purchase, commodity export, and storage facility and loan to the Secretary of Agriculture for conservation purposes. During World War II, CCC also conducted certain consumer subsidy programs.

More details covering CCC price support operations than are available in this handbook can be obtained from the CCC Chartbook which provides a graphic summary of operations from October 17, 1933, through June 30, 1955, the Monthly Report of Financial Conditions and Operations of CCC, the Annual Report of CCC, the Price Support Handbook, and the Acreage Allotment and Marketing Quota Handbook.

In using this material, it should be noted that in most cases the support price figure shown represents the U. S. average price to producers for all grades and qualities of the commodity sold at local markets. Support programs generally provide for levels of support at specific markets which reflect these average levels. The percentage of parity used is based on the parity price in effect at the time the price support announcement was made irrespective of any revisions in parity which may have been made at a later date.

This handbook was prepared by Sidney N. Gubin of the Price Division in cooperation with economists in the CSS commodity divisions responsible for the price support programs. Considerable assistance in the preparation of the handbook was rendered by members of the Price Division, particularly Miss O. Elvadney Brown, Mrs. Helen M. Bailey, and Mrs. Claire D. Bacigaluppi.

This is the second edition of this handbook which was issued originally in November 1953.

Murray Thompson

Murray Thompson
Director, Price Division

Price support levels for 1958, 1957, and 1956 crop or production

Commodity	Beginning of Unit: marketing season	1958			1957			1956

Beans, dry edible	cwt.:	Sept.	6.18	68	Feb.	68	6.31	68	Feb.	Feb.	6.31	70
Crude pine gum- unprocessed basis 11/	bb1.:	April	26.10	90	Feb.	90	25.65	90	March	March	24.80	90

1/ Minimum support; will be increased if a combination of the parity price and the supply percentage at the start of the 1958 marketing season requires a higher level of support. 2/ Commercial area only; support outside commercial area is 75% of the U. S. average rate in effect in the commercial area. 3/ Support prices originally were announced as follows: 1957: Corn - \$1.36 minimum (77%); barley - \$0.95 (70%); oats - \$0.60 (70%); rye - \$1.15 (70%); sorghum grain - \$1.83 (70%); 1956: Wheat - \$1.81 minimum (76%); corn - \$1.40 minimum (81%); rice - \$4.04 minimum (75%); barley - \$0.93 (70%); oats - \$0.59 (70%); rye - \$1.16 (70%); sorghum grain - \$1.80 (70%); butterfat - \$0.562 (78%); manufacturing milk - \$3.15 (82%). 4/ Commercial area only; outside commercial area 70% of parity, reflecting a U. S. average of \$1.27 for 1957 and 82.5% of the U. S. average rate in effect in the commercial area for 1956. 5/ Parity not separately computed for American-Egyptian, Sealand and Sea Island cotton. 6/ Support price based upon the following percentages of Burley support price: 75% for fire-cured; 66-2/3% for dark air-cured and sun-cured. 7/ Support prohibited since marketing quotas were rejected by growers. 8/ Percent of parity equivalent for milk used in manufacturing principal dairy products. 9/ Percent of parity adjusted to 60-lb. container basis. 10/ Dollars and cents figures are loan rates basis 100 grade. Percentages of parity shown are approximate. Purchase rate \$4.00 less per ton. 11/ Processed basis: 1958 - \$29.04, 1957 - \$28.29, 1956 - \$27.66.

TABLE OF CONTENTS

Part I - Summary Tables

Average prices at which CCC has supported agricultural commodities annually 1933-1956	1
Percent of parity at which CCC has supported agricultural commodities annually 1933-1956	4
Relative importance of each of the methods used to support prices of each commodity under 1954 and 1955 crop CCC price support programs	7
Percentage of total U. S. production for selected commodities placed under price support by crop years, 1950-1955	8
Proportion of the total loans, total purchase agreements and total purchases which were made on individual commodities under 1954 and 1955 crop CCC price support programs	9

Part II - Commodity Tables

CCC price support programs for cotton and related commodities:

Cotton, American-Egyptian	11
Cotton, Upland	12
Cotton, Sea Island and Sealand	13
Cottonseed	14
Flax Fiber	15
Hemp Fiber	16
Hempseed	17

CCC price support programs for dairy products:

Butterfat	19
Milk for manufacturing	20

CCC price support programs for fats and oils:

Castor bean seeds	22
Olive oil	23
Peanuts	24
Tung nuts	25

CCC price support programs for fruits and vegetables:

Canned fruits	27
Canned vegetables	27
Hops	28
Concentrated grapefruit juice	28
Dried fruits	29
Honey	30
Pecans	31
Walnuts	31
Potatoes	32
Sweetpotatoes	33

CCC price support programs for grains:

Barley	35
Beans, dry edible	36
Corn	37
Flaxseed	38
Grain sorghums	39
Hay and pasture seed	40
Oats	43
Peas, dry smooth	44
Rice	45
Rye	46
Soybeans	47
Wheat	48
Winter cover crop seeds	49

CCC price support programs for livestock and products:

Hogs	51
Lamb and mutton	53
Mohair	54
Wool	55

CCC price support programs for poultry:

Chickens	57
Eggs	58
Turkeys	59

CCC price support programs for sugar:

Puerto Rican blackstrap molasses	61
Sugar beets	61

Price support history for tobacco and naval stores:

Naval stores	63
Flue-cured tobacco, types 11-14	64
Fire-cured tobacco, types 21-24	65
Burley tobacco, type 31	66
Maryland tobacco, type 32	67
Dark air-cured tobacco, types 35-36	68
Virginia sun-cured tobacco, type 37	69
Pennsylvania seedleaf cigar filler tobacco, type 41.	70
Ohio-Miami Valley filler tobacco, types 42-44	71
Puerto Rican cigar filler tobacco, type 46	72
Connecticut broadleaf cigar binder tobacco, type 51.	73
Connecticut Havana seed binder tobacco, type 52	74
New York and Pennsylvania seed tobacco, type 53	75
So. Wisconsin cigar binder tobacco, type 54	76
No. Wisconsin cigar binder tobacco, type 55	77

PART I

SUMMARY TABLES

Average prices at which CCC has supported agricultural commodities annually, 1933 1/ - 1956

Commodity	Unit:	1956	1955	1954	1953	1952	1951	1950	1949	1948

(Continued)

Footnotes:

() Computed from announced percent of parity.

1/ The following three commodities were supported prior to 1938: Corn, 1933 - 45¢, 1934 - 55¢, 1935 - 45¢, 1936 - 55¢, 1937 - 50¢; upland cotton, 1933 - 10¢, 1934 - 12¢, 1935 - 10¢, 1936 - No support; 1937 - 9¢; peanuts, (see commodity table).

2/ U. S. average support level. For support in noncommercial area, in years when noncommercial area was established, see corn and wheat tables in Part II.

3/ Support for extra long staple cotton mandatory beginning with 1953 crops. For support level on American-Egyptian, Sealand and Sea Island in this period and earlier years, see commodity tables in Part II.

4/ For support levels for other types of tobacco, see commodity tables in Part II.

5/ For support level, see table for commodity in Part II.

Note: This summary is limited to present mandatory commodities and to other commodities (excluding crude pine gum, see commodity table) for which price support has been in effect for several recent years.

Percent of parity price at which CCC has supported agricultural commodities annually, 1933 1/ - 1956

(Continued)

Footnotes:

() Computed on basis of announced support level.

1/ The following commodities were supported prior to 1938: Corn, 1933 - 60%, 1934 - 68%, 1935 - 55%, 1936 - 66%, 1937 - 58%; upland cotton, 1933 - (69%), 1934 - (76%), 1935 - (62%), 1937 - (53%).

2/ U. S. average support level. For support in noncommercial area, in years when noncommercial area was established, see corn and wheat tables in Part II.

3/ Support for extra long staple cotton mandatory beginning with 1953 crops. For support level on American-Egyptian, Sealand and Sea Island in this period and earlier years, see commodity tables in Part II.

4/ Support is in excess of announced level because parity price at start of marketing season was lower than parity price at the time the dollars-and-cents level was announced.

5/ For support levels for other types of tobacco, see commodity tables in Part II.

6/ Percent of comparable price. In the case of milk for manufacturing percent of parity equivalent of milk for manufacturing.

7/ For percent of parity price, see table for commodity in Part II.

Note: This summary is limited to present mandatory commodities and to other commodities (excluding crude pine gum, see commodity table) for which price support has been in effect for several recent years.

Relative importance of each of the methods used to support prices of each commodity under
1955 and 1954 crop CCC price support programs 1/

1955	7/	7/	Lb.	.5755	.5532	8/.531	L	-
1956	7/	7/	Lb.	.5957	.5670	-	L	-

() Computed on basis of parity price and announced percentage of parity.

1/ The 1942 support price was estimated to be about 100 percent of the comparable price for American-Egyptian cotton.

2/ An average support price was not determined.

3/ Not available.

4/ The support price under the purchase program was based on the same relationship to the loan rate in Arizona for 1-1/16 inch Middling upland cotton as the 1942 support price for American-Egyptian cotton bore to the loan rate for such upland cotton in 1942. This was a ratio of 242/100. The original support price of \$0.48 per pound was revised upward later to \$0.4983 to fulfill this commitment.

5/ Announced "no support."

6/ Estimated on basis of parity price for date shown, and average relationship between the support price for all qualities and the support price for No. 2 (now #3) American-Egyptian cotton in 1945-1949.

7/ Parity price computation for American-Egyptian cotton was discontinued and replaced by parity price for all extra long staple cotton of which American-Egyptian cotton is a major part.

8/ Preliminary.

() Computed on basis of expected average price to growers.

- 1/ Support price f.o.b. shipping point. Support price was \$1.00 per ton higher in states other than Oklahoma, Texas (except Bowie County), and New Mexico.
- 2/ Average price to growers expected under program. (See press release 425-43 and proposed press release on 1944 program.)
- 3/ By purchase of oil, meal and linters from processors who paid support prices for cottonseed.
- 4/ Loan rate. Purchases from producers were made at these prices: 1949 - \$46.50 (average grade); 1950 - \$47.00 (basis grade); 1951 - \$61.50 (basis grade); 1952 - \$62.40 (basis grade); 1953 - \$50.50 (basis grade); 1954 - \$50.00 (basis grade); 1955 - \$42.00 (basis grade); 1956 - \$44.00 (basis grade.)
- 5/ Purchases of cottonseed also were made through ginners acting as agents for CCC.
- 6/ Computed on basis of 5-year average grade of 97.7.
- 7/ Purchases of cottonseed were made from ginners at \$51.00 per ton provided the ginner certified he paid support price to producers.
- 8/ Purchases of oil, meal and linters were made from processors who paid support price. Also purchases of cottonseed from ginners were authorized.
- 9/ Purchases of cottonseed from ginners.
- 10/ Preliminary.

COTTONSEED

Flax fiber: Price support levels and type of support under CCC price support programs

1/ Loans were made to the Dairy Products Marketing Association to buy butter at prices specified by CCC which were not to exceed 75% of the current parity price. Purchase prices were in terms of 92-score butter, Chicago, for these marketing years: 1938-39, 25 $\frac{1}{4}$ to 25 $\frac{3}{4}$ cents per lb.; 1939-40, 23 $\frac{1}{4}$ to 28 $\frac{1}{4}$ cents per lb.; 1940-41, 27 to 30 cents per lb.

2/ On April 3, 1941, the Department announced that it would support prices of dairy products through June 30, 1943, by open market purchases on the basis of \$0.31 per pound for butter at Chicago to encourage increased production. The price support level for butter was increased several times up to \$0.39 per pound in July 1942.

3/ Price support commitments under the Steagall amendment during this period were as follows: On November 28, 1942, the Secretary of Agriculture announced that butter would be supported during 1943 at not less than 90% of the parity price equivalent, but in no event less than \$0.46 per pound for 92-score butter, Chicago basis. On May 4, 1944, the Secretary announced that the price of butterfat would be supported during 1944 at 90% of parity, but in no event less than \$0.04 per pound of butterfat above returns to producers reflected by \$0.46 per pound for 92-score butter at Chicago. During the remainder of the period (1945-48), support was required at not less than 90% of parity under the Steagall amendment. No price support purchases were made during the period November 29, 1942, to December 31, 1948, because of the strong commercial market demand for butter.

4/ Prices were supported by offers to purchase butter.

5/ Estimated.

1/ On April 3, 1941, the Department announced that it would support prices of dairy products through June 30, 1943, by open market purchases at prices based on butter at \$0.31 per pound, Chicago basis, to encourage increased production.

2/ Price support commitments were limited to these announcements by USDA: Aug. 29, 1941--prices of evaporated milk, dry skim milk, and cheese will be supported at 85% of parity or comparable price thereof through Dec. 31, 1942, by loan, purchase, or other operations. Nov. 28, 1942--prices of butter, cheese, dry skim milk, and evaporated milk will be supported during 1943 at 90% of the parity price equivalent but in no event less than; \$0.46 per pound for 92-score butter, Chicago basis; the equivalent of \$0.27 per pound including subsidy for No. 1 American cheese, Plymouth basis; \$0.125 for roller and \$0.145 for spray process dry skim milk and a comparable price for evaporated milk, f.o.b. plant basis which will be announced hereafter. May 4, 1944--price of milk and butterfat will be supported during 1944 at 90% of the parity price, but in any event returns to producers during the period ending Dec. 31, 1944, shall not be less than \$0.30 per cwt. for whole milk or \$0.04 per pound for butterfat above returns to producers reflected by the following: A price for U. S. Grade A or No. 1 American cheddar cheese of \$0.27 per pound, Plymouth, Wisconsin, basis; a price for spray dried skim milk of \$0.145 per pound, and for roller dried skim milk of \$0.125 per pound, U. S. extra grade, basis f.o.b. Midwest plants; and a price for U. S. Grade A or 92-score butter of \$0.46 per pound, Chicago basis. During the remainder of this period (1945-48) support was required at not less than 90% of parity under the Steagall amendment. The only price support purchases made during this period, Aug. 29, 1941 - Dec. 31, 1948, were nonfat dry milk solids. From Mar. 1947 to Aug. 31, 1947, CCC purchased nonfat dry skim milk solids for price support at these levels: Spray, \$0.10 per pound in export barrels; roller, \$0.09 per pound.

3/ Percent of parity price equivalent for milk used in manufacturing principal dairy products (American Cheese, evaporated milk, and the butter--nonfat dry milk solids combination).

4/ Prices were supported by offers to purchase certain manufactured dairy products.

5/ Estimated.

CCC PRICE SUPPORT PROGRAMS FOR FATS AND OILS

Castor bean seeds: Price support programs undertaken by CCC

1941 crop - CCC offered to purchase castor bean seeds at 4 cents per pound (shelled basis) in warehouses in order to insure an ample supply for local planting under the castor bean production expansion program. It is estimated that this would return $3\frac{1}{2}$ cents per pound (shelled basis) to growers, or the equivalent of 2.3 cents per pound in the hull. This was a permissive program.

1942 crop - CCC offered to purchase pure castor bean seeds at 4 cents per pound for dry beans in the hull which would shell out 70 percent. The seed was used in the castor bean production expansion program. This was a permissive program.

1943 crop - CCC offered to purchase castor bean seeds at \$6.00 per hundred for dry beans in the hull which would shell out 70 percent. A premium or discount of 9 cents per hundred was provided for every percent by which the shell-out rate differed from 70 percent. This seed was to be used in connection with the castor bean production expansion program. This was a permissive program.

CASTOR BEAN SEEDS

Olive oil: Price support programs undertaken by CCC

1942 crop Loans at \$3.75 per gallon (bulk basis) were offered on olive oil of the same grade designated by OPS as the basis for ceiling price purposes. Loans were available to cooperatives or to other crushers who paid growers not less than \$127.00 per ton for Mission olives of good condition and \$117.00 per ton for Manzanillo olives of good condition. This was a permissive program.

1951 crop CCC offered loans and purchase agreements to olive producers at \$2.50 per gallon (7.61 pounds) of olive oil. This was equivalent to \$83.60 per ton for olives crushed for oil and 44 percent of the parity price for such olives as of December 1, 1951. This was a permissive program.

1952 crop CCC offered loans and purchase agreements to olive producers at \$2.50 per gallon (7.61 pounds) of olive oil. This was equivalent to \$83.60 per ton for olives crushed for oil and 50 percent of the parity price for such olives as of September 1, 1952. This was a permissive program.

() Computed from the announced percent of parity except in 1941. In 1941 the percent of parity shown was computed on basis of the announced average support level.

1/ Prior to 1941 CCC made nonrecourse loans to peanut cooperatives to finance purchase, storage and the diversion or sale of farmers' stock peanuts by these cooperatives in order to facilitate a surplus removal program of the Department. These loan programs were in effect from 1937 through 1940.

2/ Loans were made to cooperatives. These loans were similar to the loans made under the 1937 through 1940 programs. In 1942 CCC also purchased peanuts through cooperatives or from others under agreements allowing the sellers to repurchase peanuts from CCC. Purchases were made at the loan rate.

3/ The support level was originally announced at 85% of parity or \$0.062 per pound but the level was revised to the figures shown on October 3, 1942, before substantial movement of eligible peanuts.

4/ Loans to shellers who paid support prices.

5/ Preliminary.

1956	Nov. 1	65		53.76	.210		PA	PA & L	8/M

() Computed from average support level and comparable price.

1/ Support price based on nuts with these oil contents: 1944-45, 19.5%; 1947, 20%; 1949-52, 17½%; 1953-56, 18.5%.
 2/ Prior to 1944 CCC purchased tung oil for the strategic stock pile at \$0.36 per pound in 1942 and \$0.375 per pound in 1943. These purchase programs did not require processors to pay any specified prices to producers for tung nuts.

3/ Price processors required to pay for tung nuts in order to be eligible to sell oil to CCC.

4/ Oil was purchased from processors who paid support prices to producers for tung nuts. In 1947 oil purchases were made from producers of tung nuts.

5/ Processor had to make an initial payment of \$81.00 per ton to producers and to make additional payments to the extent that his average sales price for oil was above \$0.30 per pound. The figure shown here is computed on the basis of a price ceiling for oil of \$0.375 per pound.

6/ Processor had to agree to buy back oil at \$0.37 a pound or else CCC would purchase oil only at \$0.30 a pound.

7/ No program.

8/ Authority mandatory on tung nuts only.

9/ Preliminary.

TUNG NUTS

CCC PRICE SUPPORT PROGRAMS FOR FRUITS AND VEGETABLES

Canned fruits: Price support programs undertaken by CCC

During the wartime period, 1944--1945 two different types of programs ((a) an offer to purchase unlimited quantities of certain price support fruits in 1944, and (b) a guaranty to purchase a specified percentage of quantities set aside for Government use in 1945) for expanding production of certain fruits for canning were announced by the Department of Agriculture. Each of the announced programs provided for grower support prices. It was not necessary to put a CCC price support operation into effect during either year because economic conditions or purchase operations under other programs enabled growers to obtain support prices.

Canned vegetables: Price support programs undertaken by CCC

During the wartime period, 1941--1945 three different types of programs ((a) consumer subsidy, (b) offer to purchase unlimited quantities of certain price support canned vegetables, and (c) guaranty to purchase specified percentage of quantities of canned vegetables set aside for Government use) for expanding production of certain vegetables for canning were announced by the Department of Agriculture. In connection with each of these programs, beginning in 1943 (1942 for tomatoes and peas) the Department announced grower support prices. It was necessary to put a CCC price support operation into effect only on the 1945 pack, because in other years economic conditions or purchase operations under other programs enabled growers to obtain support prices. Purchases in 1945 were made at a specified percentage (86.4%) of the canner's gross ceiling. This CCC program was a permissive program.

CANNED FRUITS AND CANNED VEGETABLES

Concentrated grapefruit juice: Price support programs undertaken by CCC

1947-48 season - CCC offered to purchase a limited quantity of concentrated grapefruit juice from processors or growers on the basis of competitive offers. Purchases were made at an average price of \$1.60 per gallon. This was a permissive program.

Hops: Price support programs undertaken by CCC

1938 crop - CCC made loans to producers on 1938 hops certificated under the marketing agreement and order program at an average net loan value of 19 cents per pound. Loans were made through the Pacific Coast Hop Stabilization Corporation. Loans were made at these gross weights per pound: Prime grade, 23 cents; Medium grade, 21 cents; Common grade, 19 cents. However, CCC retained 3 cents per pound to be used in the liquidation of any hops pooled. This was a permissive program.

CONCENTRATED GRAPEFRUIT JUICE AND HOPS

Dried fruits: Price support programs undertaken by CCC

CCC price support programs were in effect for dried fruits in 10 of the 12 years between 1937 and 1948. These programs, all of which were permissive, may be classified into these three groups: (a) Prewar (1937-1940), (b) wartime production incentive (1942-1945), and (c) postwar readjustment (1947-1948).

Prewar 1937-1940

CCC made nonrecourse loans to growers' associations to facilitate a program of the Secretary of Agriculture under which surplus dates, figs, prunes, and raisins were being diverted from the normal channels of trade. The loans permitted these associations to make advances to producers and to finance the carrying and orderly marketing of the dried fruits. The maximum loan rates per ton were as follows:

	<u>1937</u>	<u>1938</u>	<u>1939</u>	<u>1940</u>
Substandard figs	\$30.00	\$27.50	\$25.00	--
Substandard dates	80.00	52.50	--	--
Prunes (80 basis)	37.50	30.00	--	\$50.00
Raisins	55.00	50.00	--	55.00

Wartime production incentive 1942-1945

The Department announced producer support prices for dried apples (1942-1944), apricots, pears, peaches, prunes, and raisins to encourage increased production. The price support levels for cut fruits were the same as the price ceilings; those for raisins and prunes were higher. These price supports were implemented by offers to purchase and, in the case of prunes and raisins, by a consumer subsidy program. It was not necessary for CCC to put any price support program in effect during the period because economic conditions, purchases for lend-lease and the military, and the subsidy program kept prices at support levels.

Postwar 1947-1948

CCC supported prices by purchases of processed fruit from processors on an offer and acceptance basis, rather than at fixed prices announced in advance. In 1947, purchases were made at these average prices per ton: apples, \$274.13; apricots, \$393.57; dates, \$177.24; figs, \$166.65; peaches, \$165.18; pears, \$236.74; prunes, \$180.12; raisins, \$160.82. In 1948, programs were announced on all dried fruits except dates, but purchases were necessary only on prunes at an average of \$154.61 and raisins at an average of \$161.56. Under the 1948 prune program, processors were required to pay producers not less than \$140.00 per ton for prunes 90/100 or larger, and not less than \$115.00 per ton for prunes of 100/120 count. Under the 1948 raisin program, processors were required to pay producers not less than \$130.00 per ton for sun-dried Thompson seedless and Muscat raisins, \$165.00 per ton for golden bleached Thompson seedless, and \$125.00 per ton for sun-dried Sultana raisins.

() Computed on basis of announced percentage support level.

1/ Percent of parity adjusted to 60-pound container basis.

2/ Average price received for honey sold in all types of containers.

3/ Not available.

4/ Prices were supported by purchases of limited quantities of surplus dark or strong flavored honey carried over from 1947 crop. Purchases were made from packers who certified they paid beekeepers not less than \$0.10 cents per pound delivered at packers' plants.

5/ No price support program.

6/ Preliminary.

HONEY, WHOLESALE EXTRACTED

Tree nuts: Price support programs undertaken by CCC

Pecans

1938 crop - CCC made a loan to the Pecan Stabilization Association, Inc., on unshelled pecans at prices not in excess of those approved by the Secretary of Agriculture. The cooperative, in turn, was required to pay growers specified prices. It is estimated that the average loan rate was about 12½ cents per pound. This was a permissive program.

1942 crop - CCC made loans to cooperative associations of producers who, in turn, made advances to producers at rates specified in the loan schedule. Provision was made also for purchases in areas where loans were not used. The facilities of the American Pecan Growers Association were used under the program. Rates in the loan schedule range from 6 to 14 cents per pound for farmers' stock unshelled pecans, depending upon grade, and from 14 to 16 cents per pound for Schley variety. It is estimated that the average loan rate reflected approximately 75 percent of parity. This was a permissive program.

1944 crop - CCC offered to purchase unshelled pecans from dealers who paid growers not less than designated prices. The program provided for the purchase of seedling pecans at 16 cents per pound, f.o.b. cars or trucks, provided growers were paid not less than 15 cents per pound. Purchases of improved pecans of the Stuart variety were to be made at 24 cents per pound for lots averaging 60 nuts or less per pound, and 22 cents per pound for those lots averaging 61 or more nuts per pound. Dealers were required to pay growers not less than 1 cent below the purchase price. It is estimated that these purchase prices reflected an average of 20.8 cents per pound, or 90 percent of the comparable price. The program was inoperative. This was a permissive program.

Walnuts

1941 crop - CCC made a loan to the California Walnut Growers Association on shelled walnuts produced from the 1941 crop at 90 percent of the market price of the walnuts pledged for security of the loan. This loan was made to enable the association to make settlement to producers on the 1951 crop and to market in an orderly manner the large quantities of shelled walnuts obtained from the 1941 crop. This was a permissive program.

TREE NUTS (PECANS, WALNUTS)

Potatoes: Price support levels and type of support under CCC price support programs

1950 4/	Jan. 1	Jan. 1	60	Bu.	(1.01)	(1.01)	-	P	-	M	-

() Computed from the parity price. The support price was announced in the form of f.o.b. shipping point price.

1/ Loans available on late crop only.

2/ Price supported in designated major areas only.

3/ Program inoperative.

4/ Price support not available in New York, Pennsylvania, Nebraska, and California (excluding Modoc and Siskiyou counties) because producers rejected marketing agreements, which were a requirement for price support in 1950.

1956	Mar. 1	70	Cwt.	6.31	L	-	PA	P

() Computed from percentage of parity at which it was announced that prices would be supported.

1/ Equivalent support price for all varieties of beans at the grower level. Support prices are announced on a grade basis by varieties, f.o.b. country shipping point.

2/ Not available.

3/ Support price for U. S. No. 1 beans delivered Eastern Seaboard; grower equivalent not available.

4/ Payments were made to processors under the subsidy program, and purchases were made from processors.

5/ Preliminary.

1956	Oct. 1	84	Bu.	$\frac{4}{2} \frac{1}{2}$	1.50	L	-	PA	M

1/ Computed on basis of unpublished parity price at time program announced.

2/ Average support level. The average support level outside the commercial corn area was 75% (82.5% in 1956), of the rate which would reflect the U. S. average level, because acreage allotments were in effect.

3/ Preliminary.

4/ Support also was provided to farmers in the commercial area who were not in compliance with acreage limitations at a U. S. average level of \$1.25 per bushel.

1956	Feb. 1	70	Bu.	3.09		L	P	PA		P

() Computed from announced dollar and cent support levels.

1/ The average support level shown is at the farmers local market level. Price support announcements usually are on a terminal market basis. The average support levels indicated in () were obtained by subtracting freight and about \$0.08 per bushel from the terminal rate at Minneapolis. From 1943 through 1946, this factor was \$0.21 per bushel. From 1947 through 1949 it was \$0.25 per bushel.

2/ Estimated to average at least 85% of June 1 parity. Level was 88% of April 1 parity at time program was announced and 86% of actual June 1 parity.

3/ Under Section 5 of P. L. 551 (78th Congress) a payment of \$5.00 per acre also was made.

4/ Payments were made to processors to cover the difference between the ceiling price and support price.

5/ Purchase contracts with processors.

6/ Preliminary.

1949	Jul. 1	60	Cwt.	3.07	3.50	L	-	PA	M	-

() Computed from announced support level.

1/ Prices of dry wrinkled peas also were supported in 1942-1944 at these grower equivalent levels: 1942 - \$3.20; 1943 - \$4.45; 1944 - \$2.45.

2/ Equivalent support price for all varieties of smooth peas on which support was undertaken, at the grower level. Support prices for most years were announced on a grade basis by varieties, f.o.b. country shipping point. In the concluding years of the program support prices also were announced on a thresher run basis.

3/ Pursuant to purchase agreements with dealers.

1956	Aug. 1	82.5	Cwt.	4.57			L	-	PA	M

1/ Prior to 1948 support level was announced on a bushel basis. Prices shown represent a straight conversion at 45 pounds per bushel.

2/ No activity.

3/ Support was mandatory at 90% of parity but since prices were so far above support, loan rates were not announced.

4/ Support is in excess of 90% of parity because parity at the start of marketing season was lower than parity at time the support level was announced.

5/ Because of the "forward pricing provision," percent-of-parity support is in excess of previously announced rate of 85%.

6/ Preliminary.

1957	July 1, 1956	82.6	Bu.	3/5/2.00	-	-	L	-	M	-

1/ Percentage of parity announced at time support level announced.

2/ Support is in excess of 90% of parity because parity at the start of the marketing season was lower than parity at the time the support program was announced.

3/ Support level is U. S. average. Support outside commercial area is 75% of the rate that would reflect the U. S. average.

4/ Preliminary.

5/ Announced as minimum support. Will be increased if a combination of the parity price and supply relationships at the beginning of the marketing year indicate a higher support price.

Hogs: Price support levels and type of support under CCC price support programs

() Computed on basis of announced support level.

1/ Support level applied to these weights and grades.

All purchases - April 3, 1941 - November 26, 1942

Good and choice barrows and gilts

240-270 lbs.	Nov. 27, 1942	- Aug. 30, 1943
200-270 lbs.	Sept. 1, 1943	- Dec. 22, 1943
200-300 lbs.	Dec. 23, 1943	- Jan. 26, 1944
200-330 lbs.	Jan. 27, 1944	- Apr. 14, 1944
200-270 lbs.	Apr. 15, 1944	- May 14, 1944
180-270 lbs.	May 15, 1944	- Sept. 30, 1944
200-240 lbs.	Oct. 1, 1944	- Nov. 25, 1944
200-270 lbs.	Nov. 26, 1944	- Apr. 10, 1945
270 top	Apr. 11, 1945	- Apr. 24, 1945
300 top	Apr. 25, 1945	- May 20, 1945
All weights	May 21, 1945	- Mar. 31, 1950

2/ Program inoperative - no purchases made.

3/ Mandatory through December 31, 1949; permissive January 1 - March 31, 1950.

For further details see - Meat and Meat Animals in World War II, - Agriculture Monograph #9, February 1951

Lamb and mutton: Price support programs undertaken by CCC

1945-46 -- A program authorizing purchase of a limited quantity (700,000 lbs.) of utility lamb and yearling carcasses and boneless lamb was approved on July 14, 1945 to take care of marketing difficulties on "soft" lambs expected in Oregon and Washington. No purchases were made. This was a permissive program.

() The support level shown was computed by using the announced percentage of parity and the annual average parity price published for each respective calendar year just after the end of the year.

1/ Announced at \$0.22, Chicago basis.

2/ Program provided for support at \$0.30 in the spring and not less than \$0.34 U. S. annual average

3/ Implemented by Midwestern price support program under which dealers or processors were required to pay (on the average) not less than these prices: 1945, \$0.24 for straight run eggs and \$0.27 for candled eggs; 1946, \$0.27 to \$0.30 (depending upon month) for current receipt eggs; 1947, \$0.33 to \$0.35 (depending upon month) for current receipt eggs; 1948 and 1949, \$0.37 for current receipt eggs delivered at the plant; \$0.35 for other purchases.

4/ Implemented by price support program under which dealers or processors were required to pay on the average \$0.27 for eggs delivered at the plant, and \$0.25 for other purchases.

5/ Announced no support.

1949	Aug. 1-Dec.1	90	Lb.	(.316)	.352	-		P	M	-	-

() Computed from announced percentage of parity and annual average parity price published at end of year except for 1947 and 1949 where the support level was based on September 1, and August 1 - December 1 average parity price.

1/ Support mandatory but no operations undertaken. No operation also in 1941 when support was permissive.

TURKEYS

CCC PRICE SUPPORT PROGRAMS FOR SUGAR

Puerto Rican blackstrap molasses

1942 crop - On August 3, 1943 a program was announced under which loans were offered on Puerto Rican blackstrap molasses made from 1942 crop sugar, which had not been shipped due to inadequate shipping space. Loans were available at a rate of 6¢ per gallon on blackstrap stored in tanks acceptable to Commodity Credit Corporation. No loans were made because of sales of the molasses by the producers. This was a permissive program.

Sugar beets

1947 crop - Under the 1947 Sugar Beet Price Support Program (which became effective November 1, 1947 following termination of the Sugar Beet Subsidy Program) the CCC entered into agreements with beet processors providing for a "support price" for each sugar beet settlement area, to be paid in full by the processor when the beets were delivered. The support price guarantee provided that the national average price received by growers, including payments under the Sugar Act of 1937, as amended, would be approximately \$14.50 per ton of beets. To enable the processors to make the support price commitment to beet growers, CCC agreed to pay to processors any amount by which the "average cane basis price" was less than \$8.20 per 100 pounds during the period when sugar from the 1947 crop was sold. This was a permissive program.

SUGAR BEETS - PUERTO RICAN BLACKSTRAP MOLASSES

1956 Feb. 1	-	-	(90)	90	7.49	.50	129.86	27.66	L	P

1/ Beginning in 1951 the average support level was based on the parity price for crude pine gum. 2/ Rosin loan rate to 1949 based on the average crop grade K; to 1954 on the average crop grade N; thereafter on the average grade W6.

3/ Production unit of 1,400 pounds of gum rosin and 50 gallons of gum turpentine. 4/ Standard barrel gross basis.

5/ No price support program in 1936 and 1937. 6/ Support level announced, but no operations required.

() Computed on basis of announced support level.

1956	July 1	90	Lb.	.489		L	-	-	-	-	-	M	-	-	

1/ Loans available, but program inoperative.

2/ Revised to 90 percent of parity or \$0.251 per pound October 2, 1942, by P. L. 729, 77th Congress.

3/ Support is in excess of 90 percent of parity because parity price at start of marketing season was lower than parity price at the time the average price support level was announced.

4/ Preliminary.
